

CONTENTS

FOREWORD	13
I. INTRODUCTION	15
1. INTRODUCTION TO THE ATMOSPHERE	17
1. Some features of atmospheres.....	17
2. The Earth's atmosphere.....	19
2.1. Composition, layers and bounds.....	19
2.2. Radiation budget, circulation and chemistry	22
2.3. Origin and evolution of the atmosphere	27
3. A brief look at other atmospheres in the Solar System.....	29
4. The Heliosphere	31
Acknowledgment	32
References.....	32
2. INTRODUCTION TO SPECTROSCOPY	35
1. Introduction.....	35
2. Electromagnetic radiation	36
3. Interaction between radiation and matter.....	38
4. Einstein <i>A</i> and <i>B</i> coefficients	39
5. Beer-Lambert law.....	41
6. Spectroscopic selection rules and Intensities	43
7. The parity selection rule.....	46
8. Line shape of transitions	47
9. Natural line broadening.....	48
10. Pressure broadening	49
11. Doppler broadening.....	50
References.....	51
3. INTRODUCTION TO ASTRONOMY	53
1. Introduction.....	53
2. Basic Concepts and units	53
3. Astronomical tools	54
3.1. Telescopes: ground-based and space Facilities.....	55
3.2. Imaging and spectroscopic techniques	55
4. The Sun and stars	56
4.1. What is a star? Stellar spectra.....	56
4.2. Stellar evolution: birth and death.....	57
4.3. Our sun	57

5. Planetary Systems	58
5.1. The Solar System	58
5.2. Extrasolar Planets	58
6. Galaxies and The Universe	59
6.1. The Milky Way	59
6.2. Galaxies and the Large Scale Structure of the Universe.....	59
6.3. Cosmology	60
References	61
II. METHODOLOGY	63
4. SPECTROSCOPIC TECHNIQUES	65
1. Introduction	65
2. Absorption	66
2.1. Fourier Transform Infrared (FTIR) Spectroscopy	67
2.2. Tuneable diode laser absorption spectroscopy	68
2.3. Differential Optical Absorption Spectroscopy (DOAS)	70
3. Fluorescence.....	71
3.1. Chemiluminescence.....	71
3.2. Laser Induced Fluorescence (LIF).....	72
4. Cavity Ring Down Spectroscopy (CRDS)	73
5. Light Detection and Ranging (LIDAR)	75
6. Resonance Enhanced Multiphoton Spectroscopy (REMPI)	76
7. Photoacoustic spectroscopy	78
References	79
5. PHOTOCHEMISTRY IN THE ATMOSPHERE.....	83
1. Radiation in the atmosphere.....	83
2. Elementary photochemical processes	85
3. Photodissociation of oxygen and ozone.....	88
3.1. Photodissociation of oxygen.....	88
3.2. Photodissociation of ozone.....	89
4. Photochemical layers	91
5. Overview of atmospheric photolytic reactions	93
Acknowledgment	97
References	97
6. SPECTROSCOPY FOR KINETIC MEASUREMENTS.....	99
1. Introduction	99
2. Radical generation.....	100
2.1. Photolytic radical generation	100
2.2. Chemical radical generation	103
3. Spectroscopic methods.....	104
3.1. Laser induced fluorescence LIF.....	104
3.2. Resonance Fluorescence.....	105
3.3. UV-absorption spectroscopy	105
3.4. Tunable Diode Laser Absorption Spectroscopy TDLAS	105
3.5. FTIR spectroscopy.....	106
3.6. Cavity Ring Down Spectroscopy CRDS	106

4. Reactors and Timing Schemes	106
4.1. Flash Photolysis	107
4.2. Fast Flow Tube	107
4.3. Atmospheric Simulation Chamber	108
References	108
7. THEORETICAL CALCULATIONS OF ATMOSPHERIC SPECIES	111
1. Introduction	111
2. Overview of <i>ab initio</i> methods	113
2.1. Mean field approximation	113
2.2. Beyond Hartree-Fock	115
3. Applicability of <i>ab initio</i> methods	120
4. Quantum and classical mechanics	121
4.1. Molecular Mechanics	121
4.2. Molecular Dynamics	121
4.3. Hybrid QM/MM	122
5. CODA	123
6. Bibliography	123
6.1. Basic	123
6.2. Somewhat more advanced	123
8. LABORATORY SIMULATIONS	125
1. Introduction	125
2. Different Scales of Laboratory Simulations	125
2.1. Aerosol Chambers	127
2.2. Aerosol Flow Tubes	127
2.3. Particle Traps	128
2.4. Reaction Cells	129
2.5. UHV Methods	130
3. Models of Cirrus Clouds	131
4. Models of Polar Stratospheric Clouds	133
Acknowledgment	135
References	135
9. DIFFERENTIAL ABSORPTION SPECTROSCOPY AS A TOOL FOR SCANNING THE ATMOSPHERE	139
1. Introduction	139
2. The DOAS technique. Ground-based spectroscopy	140
3. Atmospheric species measured by DOAS	143
4. The Ring effect	145
5. Typical spectrometer configuration	145
Some applications	146
Recommended readings	148
10. OPTICAL PROPERTIES OF THE ATMOSPHERE	149
1. Emission of light by the Sun and the Earth	149
1.1. Black body radiation. Emission spectra of the Sun and the Earth	149
1.2. The radiation balance. Albedo and the greenhouse effect	150

2. Absorption, scattering, reflection, and refraction by the atmosphere ...	151
2.1. Absorption and scattering by gases	151
2.2. Absorption and scattering by aerosols	152
2.3. Reflection	153
2.4. Refraction	153
3. Optical effects in atmospheric spectra	153
Acknowledgements	155
References	155
 III. ATMOSPHERE	171
11. GAS PHASE CHEMISTRY IN THE TROPOSPHERE	173
1. Introduction	173
2. Composition and structure of the atmosphere	174
3. Sources, sinks and transport	175
4. Spatial and temporal scales	176
5. Principal species in the troposphere	177
5.1. Carbon-containing compounds	177
5.2. Nitrogen-containing compounds	178
5.3. Sulphur-containing compounds	178
5.4. Tropospheric ozone	179
6. Oxidation and transformation	179
6.1. Photochemical initiation	179
6.2. Oxidations steps	180
6.3. Tropospheric ozone production	181
6.4. The importance of NO _x	182
7. Air Pollution	183
7.1. Clean and polluted air	183
7.2. Sulphur pollution	183
7.3. Photochemical smog	184
References	184
12. STRATOSPHERE	185
1. Introduction	185
2. Measured Ozone Levels in the Atmosphere	186
3. Oxygen-Only or Chapman Mechanism	188
4. Ozone Catalytic Loss Cycles	189
5. Null Cycles, Holding Cycles and Reservoirs	191
6. Polar Ozone Holes	192
Selected Readings	197
13. THE IONOSPHERE OF THE EARTH	199
1. Introduction	199
2. The ionospheric layers	200
2.1. The D Layer	202
2.2. The E Layer	202
2.3. The F ₁ Layer	203
2.4. The F ₂ Layer	203

3. Ionospheric chemistry	203
3.1. Chemistry of the F-region.....	204
3.2. Chemistry of the E-region	205
3.3. Chemistry of the D-region	207
4. Perturbations in the Ionosphere.....	208
4.1. X-rays: sudden ionospheric disturbances (SID)	208
4.2. Protons: solar proton events (SPE) and polar cap absorption (PCA).....	208
4.3. Geomagnetic storms	209
4.4. Lightning	210
5. The ionosphere and radio wave propagation.....	210
6. Life in the upper atmosphere	214
Acknowledgments.....	215
References.....	216
 IV. SPECIAL TOPICS.....	217
14. ATMOSPHERIC AEROSOLS OF MARINE AND URBAN ORIGIN	219
1. Introduction.....	219
2. Marine atmospheres	222
3. Urban atmospheres.....	228
References.....	234
15. IONS IN THE ATMOSPHERE AND TRANSIENT LUMINOUS EVENTS	237
1. Introduction.....	237
2. Positive Ions	239
2.1. Positive ions in the E region	240
2.2. Positive ions in the D region.....	240
2.3. Positive ions in the stratosphere.....	241
2.4. Positive ions in the troposphere	242
3. Negative Ions.....	243
3.1. Negative ions in the D region	243
3.2. Negative ions in the stratosphere	244
3.3. Negative ions in the troposphere.....	245
4. Types of TLE and how sprites are produced.....	246
5. TLE spectroscopy	247
6. TLE induced atmospheric chemistry	248
Acknowledgments.....	249
References.....	250
16. SPACE MISSIONS TO COMETS.....	255
1. Introduction.....	255
2. Limitations of cometary observations in the infrared and using mass spectroscopy. First results	257
3. Cometary missions.....	258
3.1. The Vega and Giotto missions to comet Halley.....	258
3.2. The Deep Space 1 mission.....	259

3.3. The Deep Impact mission	259
3.4. The Stardust mission	260
3.5. The Rosetta mission.....	260
4. Delivery of extraterrestrial organic matter to the early Earth	261
References	262
17. UV-VIS SPECTROMETERS IN SPACE FOR ATMOSPHERIC MISSIONS	265
1. Introduction	265
2. How satellite spectrometers work	266
2.1. Nadir mode observations	266
2.2. Occultation mode observations	268
3. Some examples of events observed by DOAS-satellite	270
3.1. Large scale spatial structures by nadir looking DOAS	270
3.2. Pollution and volcano emission episodes	270
3.3. Profiles	271
4. Summary	272
Acknowledgements	272
Recommended readings	272
18. RADIATIVE FORCING BY GREENHOUSE GASES, GLOBAL WARMING AND CLIMATE CHANGE	275
1. Introduction: general concepts and scientific understanding	275
2. Energy budget of the Earth and radiative transfer. The radiative transfer equation	280
2.1. Radiative transfer equation	282
3. Structure, chemical composition and natural greenhouse effect of the atmosphere	284
4. Greenhouse gases: spectroscopic frequencies of absorption, radiative forcing and band saturation	288
5. The complexity of climate system: oceans and feedback mechanisms	293
6. General circulation models of climate: attributions and predictions. Other possible effects: sudden climate changes	297
7. Discussion	300
References	301
