Academic Profiles	15
Preface	23
Abbreviations, acronyms and symbols	25
Chapter 1. Nuclear magnetic resonance spectroscopy	
(Jesús Sanz)	31
Abstract	31
1. Introduction	31
2]. NMR detection	32
3. Spin interactions	34
3.1. Chemical shift	34
3.2. Dipolar coupling	35
3.3. Paramagnetic Interactions	36
3.4. Quadrupolar coupling	38
4. High resolution techniques	39
4.1. Technique MAS	40
4.2. Decoupling techniques	45
4.3. Cyclic pulse sequences	47
4.4. Recoupling techniques	49
5. Two-dimensional techniques	52
5.1. Anisotropic patterns	52
5.2. Chemical shift correlations	55
6. Materials study	56
6.1. Substitutional disorder	57
6.2. Ion and Molecular mobility	58
7. Conclusions	60
Acknowledgements	61
References	61
Chapter 2. Structural modeling of solids combining DFT and NMR	
studies (Virginia Díez-Gómez)	65
Abstract	65
1. Introduction	65
2. Methodology and strategies	67
2.1. DFT calculation of NMR parameters	71
3. Structural models (input)	73
4. Results of calculations (output)	75

5. Comparing calculations with experimental results	76
6. Dynamics	77
7. Applications	78
7.1. Improvement/selection of structural models.	79
7.2. Assignment of NMR resonances	82
7.3. Disorder.	85
7.4. Dynamics.	93
8. Conclusions	96
Acknowledgments	97
References	97

Chapter 3. Medium-range order in crystal structures of minerals by NMR (Luis Sánchez-Muñoz, Jesús Sanz, Isabel Sobrados, Zhehong Gan, José Ignacio Santos)

	103
Abstract	103
1. Crystals and minerals.	103
2. Dynamic structures In SiO_2	107
3. Medium-range order in k-feldspars KAlSi_3O_8	113
4. Solid solution and protons in Beryl	120
5. Conclusions	125
Acknowledgements	127
References	127

Chapter 4. Raw Materials for ceramics (Isabel Sobrados, Jesús Sanz, Sandra Martínez)

	133
Abstract	133
1. Introduction	133
2. Silica polymorphs.	134
2.1. ^{29}Si NMR spectroscopy	134
2.2. Silica Classification.	136
2.3. Characterization of different types of silicas by NMR spectroscopy.	137
3. Aluminum oxides.	142
3.1. ^{27}Al MAS NMR spectroscopy	142
3.2. Transitional aluminas.	143
3.3. Characterization of aluminas by NMR spectroscopy.	144
4. Clay minerals	150
4.1. Structure.	150
4.2. Classification	151
4.3. Structural Characterization of 1:1 and 2:1 phyllosilicates	152
4.4. Clay chemistry. Adsorption Phenomena	162
4.5. Reactivity of Clay Minerals	163
5. Conclusions	167
References	167

Chapter 5. Structural studies of radionuclides immobilized matrix by solid state NMR (María D. Alba, Juan I. Corredor, Esperanza Pavón) . .	171
Abstract	171
1. Introduction	171
2. Vitrification	172
2.1. Structural changes in glasses due to HLW waste.	173
2.2. Glass leaching	178
2.3. Challenges	182
3. Efficiency of the engineering barrier	183
3.1. Chemical analogous of HLW in oxidation state +3.	184
3.2. Chemical analogous of HLW in oxidation state +4.	193
4. Conclusions	195
Acknowledgements	195
References	195
 Chapter 6. Cementitious materials (Ana Fernández-Jiménez, Ángel Palomo)	 205
Abstract	205
1. Introduction	205
2. ²⁷ Al spectra	211
2.1. Calcium Monoaluminate (CA) and Calcium Aluminate Cement (CAC)	212
2.2. Tricalcium Aluminate (C ₃ A) and Ordinary Portland Cement (OPC)	213
2.3. Calcium sulfoaluminate (C ₄ A ₃ S).	215
3. ²⁹ Si spectra	216
3.1. Calcium silicates: C ₃ S, C ₂ S and portland and belite cements.	217
3.2. Octahedral silice coordination: Thauasite.	219
4. C–S–H, C–A–S–H and N–A–S–H (cementitious gel) structure.	220
4.1. C–S–H gel structure.	220
4.2. The role of Al in the C–S–H gel structure: C–A–S–H gel	225
4.3. N–A–S–H gels: Ca-low alkaline cements	231
4.4. Cementitious gel compatibility: hybrid alkaline cements	233
5. Conclusions	238
Acknowledgements	239
References	239
 Chapter 7. Glasses and glass-ceramics (Francisco Muñoz, Randall E. Youngman)	 245
Abstract	245
1. Introduction	245
1.1. The glassy state and theories of glass structure	246
1.2. NMR active nuclei in glasses.	247
2. Silicates and glass-ceramics.	249
2.1. ²⁹ Si NMR.	249
2.2. Glass-Ceramics NMR	251

3. Borates and borosilicates	254
3.1. ^{11}B NMR	255
4. Phosphates	258
4.1. ^{31}P NMR	259
5. Intermediate and modifier elements: ^{27}Al , $^{6,7}\text{Li}$, ^{23}Na , ^{43}Ca	264
5.1. ^{27}Al NMR	264
5.2. ^{71}Ga NMR	266
5.3. $^{6,7}\text{Li}$ NMR	267
5.4. Other Nuclei	269
6. Anions in glasses	271
6.1. ^{17}O NMR	271
6.2. ^{19}F NMR	273
6.3. ^{15}N NMR	275
7. Conclusions	276
Acknowledgements	276
References	276

Chapter 8. Solid state NMR spectroscopy applied to the structural characteriation of zeolites (Teresa Blasco, José Alejandro Vidal-Moya) . .

Abstract	281
1. Introduction	281
2. ^{29}Si NMR of zeolites.	285
2.1. ^{29}Si NMR of aluminum rich zeolites	286
2.2. ^{29}Si NMR of pure or high silica zeolites. NMR Crystallography	287
2.3. Five-coordinate silicon and ^{19}F MAS NMR	292
3. ^{27}Al NMR of zeolites	297
3.1. NMR Invisible aluminum	300
3.2. Extra-framework aluminum (EFAL)	303
3.3. Siting and distribution of aluminum atoms in zeolite framework	306
4. ^1H NMR in zeolites	309
5. Conclusions and perspectives.	311
References	312

Chapter 9. Adsorption and heterogeneous catalytic processes studied by *in situ* NMR (Manuel Sánchez-Sánchez)

Abstract	319
1. Introduction	319
1.1. Adsorption and heterogeneous catalysis in industry	320
1.2. NMR vs other spectroscopies in adsorbate-adsorbent systems	321
1.3. Magnetic interactions in the “adsorbed” state of matter	324
2. Experimental devices for <i>in situ</i> NMR	325
2.1. Devices under batch conditions	326
2.2. Devices under continuous flow	327
2.3. Comparison between the different devices.	327

3. Adsorbents and adsorption processes studied by NMR	329
3.1. Characterization of solids by NMR of adsorbed probe molecules	329
3.2. Pore accessibility by ^{129}Xe NMR	334
3.3. Adsorption processes	336
4. Catalytic processes studied by NMR	337
4.1. <i>In situ/operando</i> NMR study of catalytic reactions: the case of MTO	337
4.2. Beckmann rearrangement mechanism by ^{15}N MAS NMR	340
4.3. <i>In situ</i> electrochemical NMR studies	341
5. Overcoming NMR limitations	343
5.1. Low ^{13}C sensitivity as an advantage to elucidate reaction mechanisms	343
5.2. Paramagnetic probe molecules to study the accessibility to adsorbents	344
5.3. Long time scale to directly measure the average zeolite basicity	345
5.4. Chemical shift anisotropy interaction to localize adsorbates	345
6. Conclusions and perspectives.	346
Acknowledgements	348
References	348

Chapter 10. NMR spectroscopy of solid ion conductors (Jesús Sanz, Juan Miguel López del Amo).	355
Abstract	355
1. Introduction	355
2. Fast ion conductors	356
3. NMR background	358
4. Inorganic electrolytes	360
4.1. Lanthanum titanates	361
4.2. NASICON compounds	363
5. Cation mobility	370
5.1. Exchange processes	371
5.2. NMR relaxation	371
5.3. Diffusion coefficients	373
5.4. Two-dimensional NMR techniques	375
5.5. NMR vs Impedance spectroscopy	375
5.6. DFT simulation and Molecular Dynamics	378
6. Grain-boundary effects.	378
6.1. H/Li exchange	378
6.2. Phases segregation	380
7. Polymer electrolytes	381
7.1. PEO-based polymer electrolytes	381
7.2. Grafted nanoparticles	382
8. Proton conductors	383
8.1. Sulfonated polystyrene polymers.	384

8.2. Inorganic porous structures	385
9. Conclusions	385
Acknowledgements	386
References	386

Chapter 11. Electrode materials (Juan Miguel López del Amo,

Jesús Sanz)	391
Abstract	391
1. Introduction	391
2. Paramagnetic interactions by solid-state NMR	392
2.1. The Fermi-contact interaction	393
2.2. The dipolar interaction	394
3. Solid state NMR of cathode materials	395
3.1. Na-based	395
3.2. Li-Based electrodes.	413
4. Solid state NMR of anodes	416
4.1. Introduction.	416
4.2. Alloys.	417
4.3. <i>In situ</i> solid state NMR of carbon-based anodes.	417
4.4. <i>In situ</i> detection of dendrites	418
5. Conclusions	419
References	420

Chapter 12. Active pharmaceutical ingredients

(Rosa M. Claramunt, José Elguero)	425
Abstract	425
1. Introduction	425
2. Simplest cases, $\zeta' = 1$	426
3. Splittings, $\zeta' > 1$	427
4. Polymorphs	429
5. Co-crystals	433
6. Solvates and salts	436
7. Interactions api-excipient and between two apis (other than co-crystals).	439
8. Amorphous forms and dispersions.	441
9. Conclusions	441
Acknowledgments	442
References	442

Chapter 13. Polymers (Leoncio Garrido)

Abstract	451
1. Introduction	451
2. Applications of solid state NMR in polymers	452
2.1. High-resolution solid state NMR.	453
2.2. Heterogeneous polymer systems	459

3. Rubbers and gels	460
4. Molecular dynamics and transport in polymers.	461
4.1. Polymer molecular dynamics.	463
4.2. Transport in polymers	463
5. Outlook in solid state NMR of polymers.	466
6. Conclusions	467
Acknowledgments	467
References	467

Chapter 14. Peptides and proteins in the solid state

(Juan Miguel López del Amo)	471
Abstract	471
1. Introduction	471
2. Experimental approaches	472
2.1. Isotope Labelling Schemes	472
2.2. Basic pulse sequences for solid state NMR	474
3. Advanced solid state NMR techniques	477
3.1. FROSTY/sedimentation.	477
3.2. Proton detection in solid state NMR of proteins by perdeuteration	479
3.3. Proton-detected solid state NMR for proteins under fast MAS. . .	485
4. Amyloid aggregates	486
4.1. Amyloid fibrils	486
4.2. Amyloid fibrils interacting with drug candidates for Alzheimer's disease treatment	488
4.3. Dynamic nuclear polarization (DNP) solid-state NMR.	494
References	497
