The Cajal Library. Pioneers of Neuroscience Collection.....	11
---	----

INTRODUCTORY STUDY

Introduction.....	15
History of the neuron.....	21
Relationship between nerve cells and nerve fibers.....	25
The <i>reazione nera</i> and the discovery of the detailed morphology of the nerve cell.....	27
Theories on the organization of the nervous system: reticular theory and neuron theory.....	32
Reticular Theory: A diffuse network without interruptions...	34
Neuron Theory: nerve cells constitute an anatomical and functional unit.....	38
Cajal enters the scene.....	41
The resurgence of the Reticular Theory: Golgi <i>versus</i> Cajal.....	59
Ultrastructural confirmation of neuronal individuality: the discovery of the synaptic cleft.....	79
The neuron theory in the modern era: new horizons in neuroscience.	81
Electrical synapses.....	83
Volume transmission.....	88
Other modalities of interaction among the components of the nervous system.....	89
New technologies for three-dimensional study of synaptic organization.....	90
Concluding remarks.....	96
Bibliography.....	97

NEURON THEORY OR RETICULAR THEORY?

Preface I.....	111
Translators' Note.....	115

Preface II.....	117
Ramón y Cajal, an appreciation.....	119
Neuron Theory or Reticular Theory? Objective Evidence of the Anatomical Unity of Nerve Cells.....	121
PART ONE	
01.- Historical notes about the neuron theory.....	124
02.- Histological proofs.....	134
Varieties of Synapses. The Cellular Membrane.....	134
03.- 1. Axo-somatic connections by means of nerve baskets rich in fibers («nests» or «baskets» of the cerebellum, etc.).....	142
Objections to my interpretations of the baskets and brushes	149
2. Axo-somatic connections by means of baskets or nests poor in axonal branches.....	154
04.- 3. Nests or chalices of Held in the nucleus of the trapezoid body.....	156
Critical observations of Held and doubts of Bielschowsky....	160
4.-Axo-somatic connections in the ventral cochlear nucleus.....	168
05.- 5. Peripheral terminations of the cochlear nerve in the organ of Corti. Terminations of the vestibular nerve.....	170
06.- 6. Axo-somatic connections by means of thick terminal tubercles with or without pericellular projections. (Retina). Tubercles of the vestibular nerve in the lateral nucleus of the medulla in birds and fishes. Bulbs of Held. «Endfüssen» of the motor nerves.....	184
07.- 7. Climbing fibers or longitudinal axo-dendritic connections. Axo-dendritic connections by means of gears.....	204
8. Axo-dendritic connections by gearing (mossy fibers, insect retina, etc.).....	211
08.- 9. Cruciform axo-dendritic connections of great length. Molecular layer of the cerebellum and the interpeduncular nucleus.....	220
09.- 10. Terminations upon circumscribed cellular pleiades. Con- nections in the thalamus. Complex connections in the cerebral cortex.....	226
010.- 11. Apparent objections to the neuron theory based on recent studies of the sensory and motor end-organs.....	246
011.- 12. The latest conception of Held on the structure of the gray substance.....	262

PART TWO

012.- I. Neurogenetic unity as a proof of the neuron theory. Free growth of the axons in tissue culture. Error of the supposed initial ensheathment in the course of the embryonic axons. Free growth of the newly-formed fibers in the scar of the sectioned nerve.....	274
013.- II. Anatomicopathological facts favorable to the neuron theory. Persistence of the baskets and other pericellular terminations, etc.....	286
Conclusion.....	293
Bibliography.....	295
Index of Authors.....	307
