<b>Abstract</b>	<b>xvii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Motivation . . . . .	2
1.2 Contributions . . . . .	4
1.3 Structure . . . . .	8
1.4 Publications . . . . .	9
<b>2 Related Work</b>	<b>13</b>
2.1 Logics of Norms . . . . .	13
2.2 Normative Computational Languages . . . . .	16
2.2.1 Conditional Deontic Logic with Deadlines . . . . .	16
2.2.2 Z Specification of Norms . . . . .	17
2.2.3 Event Calculus . . . . .	18
2.2.4 Rights and Obligations . . . . .	19
2.2.5 NoA Agent Architecture . . . . .	20
2.2.6 Social Integrity Constraints . . . . .	20
2.2.7 Object Constraint Language . . . . .	21
2.2.8 Hybrid Metric Interval Temporal Logic . . . . .	22
2.3 Models for Regulated MAS . . . . .	24
2.3.1 Electronic Institutions . . . . .	24
2.3.2 MOISE and MOISE <sup>+</sup> . . . . .	26
2.3.3 Commitment-based Institutions . . . . .	27
2.3.4 OperA . . . . .	28
2.3.5 LGI Model . . . . .	29
2.3.6 Electronic Institutions for Virtual Organisations . . . . .	30
2.3.7 Multi-agent Policy Architecture . . . . .	30
2.4 Conclusions . . . . .	31
<b>3 Regulating Activities in Electronic Institutions</b>	<b>35</b>
3.1 A Normative Language for Electronic Institutions . . . . .	36
3.1.1 Examples . . . . .	37
3.2 Executable Norms . . . . .	39
3.2.1 Jess . . . . .	39

3.2.2	Norm implementation . . . . .	40
3.3	Developing and Deploying Norms . . . . .	43
3.3.1	Automatic Translation of Norms . . . . .	43
3.3.2	Integration with Electronic Institutions . . . . .	44
3.4	Conclusions . . . . .	45
<b>4</b>	<b>Constraint-based Regulation</b>	<b>49</b>
4.1	A Rule Language for Managing Normative Positions . . . . .	50
4.1.1	Preliminary Definitions . . . . .	52
4.1.2	A Language for Rules with Constraints . . . . .	53
4.1.3	Semantics of Rules . . . . .	54
4.1.4	An Interpreter for Rules with Constraints . . . . .	56
4.1.5	Pragmatics of Rules with Constraints . . . . .	57
4.2	Programming Institutional Rules . . . . .	58
4.2.1	Institutional States . . . . .	59
4.3	Providing Semantics to Deontic Notions . . . . .	60
4.4	Normative Conflict Resolution . . . . .	62
4.4.1	Representing and Enacting Protocols via Institutional Rules	63
4.4.2	Example: The Dutch Auction Protocol . . . . .	64
4.5	Conclusions . . . . .	67
<b>5</b>	<b>Regulating Concurrency</b>	<b>69</b>
5.1	$\mathcal{I}$ : A Language for Institutions . . . . .	70
5.1.1	Semantics . . . . .	72
5.1.2	Operational Semantics . . . . .	73
5.1.3	Interpreter . . . . .	77
5.2	Example of Concurrency: Soup Bowl Lifting . . . . .	79
5.3	Applied Example: Bank . . . . .	80
5.4	Norm-Oriented Programming of Scenes . . . . .	82
5.4.1	Providing Semantics to Normative Positions . . . . .	82
5.4.2	Normative Conflict Resolution . . . . .	83
5.5	Conclusions . . . . .	84
<b>6</b>	<b>A Normative Structure for Multiple Activities</b>	<b>87</b>
6.1	Scenario . . . . .	88
6.2	Normative States, Transitions and Structures . . . . .	89
6.2.1	Example . . . . .	92
6.3	Formalising Conflict-Freedom . . . . .	94
6.3.1	Mapping Normative Structures to Coloured Petri Nets . . . . .	95
6.3.2	Properties of Normative Structures . . . . .	96
6.4	Resolving Normative Conflicts in Run-time . . . . .	98
6.4.1	Conflict Detection . . . . .	98
6.4.2	Conflict Resolution . . . . .	99
6.5	Conclusions . . . . .	101

<b>7 Computational Model and Distributed Architecture</b>	<b>103</b>
7.1 Proposed Distributed Architecture . . . . .	103
7.1.1 Social Layer Protocols . . . . .	106
7.2 Conclusions . . . . .	111
<b>8 Conclusions and Future Work</b>	<b>113</b>
8.1 Conclusions . . . . .	113
8.2 Future Work . . . . .	117
8.2.1 Improving Expressiveness . . . . .	117
8.2.2 Electronic Institutions . . . . .	119
8.2.3 New applications using norms . . . . .	120
<b>A UML Diagrams</b>	<b>121</b>
<b>B An Interpreter for <math>\mathcal{I}</math></b>	<b>123</b>
